I.D. Systems and Pendulum Services Offer Vehicle Asset Management to U.S. Military

CHARLESTOWN, Ind.--([BUSINESS WIRE](#))--Pendulum Services LLC (<http://www.pendulumsite.com>) announced today that it has signed a Teaming Agreement with I.D. Systems, Inc. to supply I.D. Systems' *PowerFleet*® and *AVRamp*® Vehicle Management Systems to the U.S. military and other U.S. Government customers. Under the terms of the agreement, Pendulum is an authorized partner of I.D. Systems, providing the wireless technology provider's comprehensive industrial fleet management solutions as sales or services.

PowerFleet® technology was recently demonstrated successfully at [Sierra Army Depot](#) under a project termed the Centralized Fleet Automated Management System (CFAMS). The demonstration showed that CFAMS could significantly decrease vehicle maintenance costs by introducing improved process controls, reduce fleet size (and related capital and operating costs) by optimizing vehicle productivity, and improve safety and reduce vehicle damage by establishing a higher level of vehicle accountability.

Additional applications of I.D. Systems' wireless vehicle management technology include airports, where geofencing can eliminate runway incursions by service vehicles and provide real time vehicle location tracking and dispatching.

Charles S. "Sid" Saunders, manager of Pendulum Services, said, "This is a wonderful opportunity to bring the safety, cost and efficiency benefits of wireless vehicle management technology to the U.S. military through government service contracts. The CFAMS demonstration at Sierra Army Depot proved the value of these systems to the military. Pendulum Services will make CFAMS available to other military installations as a service, as a flexible alternative to the Government's capital purchase process. We envision a long and healthy relationship with I.D. Systems as we introduce their technology to a broad community of users."

Pendulum Services LLC, a Veteran Owned Small Business (VOSB), was formed in 2002. It is one of The Pendulum Group of companies which include Pendulum Management Company LLC (a VOSB) and Pendulum Resources, a Service Disabled Veteran Owned Small Business (SDVOSB). Pendulum Services is headquartered in Charlestown, Indiana and also has offices in Rock Island, IL, and San Antonio, TX.

I.D. Systems (NASDAQ: IDSY; www.id-systems.com), a Hackensack, NJ-based manufacturer founded in 1993, provides wireless vehicle management technology for many of the world's leading manufacturers, distributors, retailers and government agencies. The company's wireless solutions secure, track and manage high-value enterprise assets, including industrial vehicles, such as forklifts and airport ground support equipment, and rental cars. The company's patented [PowerFleet](#)™ and [AvRamp](#)™ systems utilize RFID technology to control, track, monitor and analyze fleets of such vehicles and the people who operate them.
